

WAIT!

We can use that again!

Did you know that some of your favorite drinks come in cans and plastic bottles that were made to be remade?

You heard that right, when you recycle plastic bottles they can be cleaned, ground up into pellets and turned into new bottles or other items like t-shirts or sweaters. And you can help make this happen — all you have to do is recycle!

Here are five things you should know:

- 1 Recycling helps the environment!** When you recycle, we can reuse existing materials to make bottles and cans, saving more natural resources.
- 2 Recyclable items are not trash!** Our bottles and cans don't belong in landfills or nature. Help us keep them out of Florida's oceans, rivers and beaches by placing them in a recycling bin/receptacle.
- 3 Recycling helps save energy too!** Recycling 10 plastic bottles saves enough energy to run a laptop computer for 25 hours. And recycling one aluminum can saves enough to power a TV for up to three hours.
- 4 You can make a difference!** We need your help to get our 100% recyclable bottles back. By working together, we can keep Florida a beautiful place to live and play.
- 5 Don't forget the cap!** Put that cap back on your bottle, so it can be recycled and turned into something new, too.

Fun Facts

What makes our bottles unique is what they're made from. It's a light and strong plastic material called PET that is easy to recycle and make into new bottles.

When recycled, our cans can be remade and be back on store shelves in just 60 days.
